1. INTRODUCTION

1.1. Document Purpose

This document presents the L4 Functional Requirements Processes for Registration and Authorisation Data Management. This includes L4 processes that show the human interaction tasks and the automated tasks and the information exchanges. In addition, there is an annex containing graphic representations of the L4 Business Process Diagrams. This report is generated from ARIS and only contains information present in ARIS.

1.2. Deviation From TEMPO

The following TEMPO sections are not part of this document:

- Sign Off list;
- Distribution List;
- Scope;
- Applicable Documents;
- List of Tables;
- List of Figures.

The following TEMPO sections are added to this document:

- Project Ownership;
- Intended Audience.

1.3. Assumption and Constraints

The reader should have a basic knowledge of the EU BPM methodology.

1.4. Project Ownership

The unit DG TAXUD/C2 is the project owner of this Excise Functional Requirements BPM Report.

1.5. Intended Audience

The purpose of this document is to establish a common understanding between readers that are familiar with the applicable documents and may belong to the following categories:

- Any person responsible for the Excise - EMCS business / system processes, requirements, functional specifications or conformance testing;
- Any person responsible for the Export - AES business / system processes, requirements, functional specifications or conformance testing;
- Any person of the development team of DG TAXUD/C5 who will use this document as a reference during the development cycle;
- Any person from the DG TAXUD units who has to verify whether the current document is consistent with the applicable documents and depicts the solution to be followed;
- Any Member State (MS) or Trade representatives who have to identify the actions, implications and consequences on their national domain, including both business people and people having an IT background.

1.6. Structure of Document

This document is organised as follows:

- Introduction;

INTRODUCTION

- References, containing a list of acronyms and abbreviations and the documents referenced in this functional requirements document;
- Document History, listing the different versions and submission dates of this functional requirements document;
- High Level System Overview, providing an overview of the system and the actors involved in this functional requirements document;
- Process Models, visualising in separate sections information from all L4 BPMs relating to the system covered in this functional requirements document.

In separate document, the following related annex may be found:

- Annex 1: Model Graphics, providing all L4 BPM models

4. HIGH LEVEL SYSTEM OVERVIEW

4.1. System Overview

This document contains the functional specifications for the Excise Movement and Control System to which any Nationally Developed Excise Application (NDEA) and Centrally Developed Excise Application (CDEA) needs to conform. These functional specifications are to be regarded as the basis for the development of the technical specifications (i.e. DDNEA – 'Design Document for National Excise Applications'). It is important to note that the complete functional specifications can be found in ARIS and that this document is envisaged to be supporting documentation to the diagrams and information in ARIS. If the legal baseline of this document would change, the functional specifications will need to be updated and aligned.

Since the actual implementation of the system is under national responsibility, the division between user interface and automated tasks included in this document should be considered as a proposal from DG TAXUD. MSAs are free to deviate and introduce more or less automation. However, as with all Trans-European Systems, compliance with the common domain information exchanges will be mandatory to ensure automated communication between MSAs.

4.2. Actors

ACTORS	DESCRIPTION
SEED-on-Europa site	SEED-on-EUROPA site is made available via the EUROPA web portal, and is intended for use by economic operators (who cannot directly access the SEED). Although SEED-on-EUROPA site is intended for use by economic operators, the EUROPA portal is a public site that can be accessed by any Internet users. As such, the information offered by SEED-on-EUROPA site is intentionally limited to avoid the possibility of any misuse of the published excise data.
MSA Central Services	Central services in each MS: <ul style="list-style-type: none"> · produce, submit, receive and keep SEED and reference data information including the EOL; · request and receive SEED statistics.
SEED user	SEED user interacts with SEED (System for Exchange of Excise Data) to achieve his/her business goals or to support the primary functions.
Common Domain Central Services	Central services in the Common Domain: <ul style="list-style-type: none"> · receive, validate, consolidate, keep and disseminate registration information and the EOL; · produce, keep and disseminate reference data; · produce and send SEED statistics; · ensure a global monitoring of the system and provide some added value services.
SEED	The System for Exchange of Excise Data (SEED) is located in the Common Domain. It provides management and dissemination services regarding information on the Economic

Excise Functional Requirements BPM Report-Registration and Authorisation Data Management
HIGH LEVEL SYSTEM OVERVIEW

	Operators register and the Reference Data register. It also provides exchange of SEED statistics.
Requestor	Any person accessing the Web.
SEED-on-Europa service	SEED-on-EUROPA service provides accessing of some SEED register data (simple verification of excise authorisations).
Excise Authority	

5. PROCESS MODELS

5.1. Process L4-RADM-01-00-Registration and Authorisation Data Management Master Process

5.1.1. Objective of Process

The purpose of this diagram is to present in one diagram the main flow concerning Registration and Authorisation Data Management. This diagram mainly focuses on the successful path. For more details please check the respective L4 BPMN diagrams.

5.1.2. Process Details

PROCESS ATTRIBUTE NAME	PROCESS ATTRIBUTE VALUE
Process ID	L4-RADM-01-00
Full Name	Registration and Authorisation Data Management Master Process
Assumptions	The following discrepancy is detected between FESS and DDNEA: According to DDNEA (see Sub-section “V.I.3.1.2 Dissemination of SEED data (UC1.14)” of DDNEA), after receiving a valid IE713 from a MSA, SEED disseminates this valid IE713 to all MSAs that opted for receiving IE713 disseminations. This is also in alignment with the current system behaviour. However, in FESS Section II (see EBP UC-115-110 “Disseminate changes”), it is not clarified that, in this scenario, SEED sends the IE713 only to the MSAs who are registered to receive IE713 disseminations. Given that DDNEA is considered valid in this case, the concerned part of the flow is depicted in alignment with DDNEA.
Constraints	No constraints.

5.2. Process L4-RADM-01-01-Maintenance of registration data

5.2.1. Objective of Process

The purpose of this process is to describe all possible paths in the electronic flow of the maintenance of registration data, in accordance with the current Common Specifications (FESS and DDNEA) (*).

The process is triggered when SEED at Common Domain Central Services receives an Operations on the register of economic operators message (IE713) from Central Services of an MSA (MSA Central Services).

After receiving the Operations on the register of economic operators message (IE713) from the MSA Central Services, SEED at Common Domain Central Services validates its data by using the “L4-RADM-01-07-Perform validation of Common Domain message” sub process. Then, SEED proceeds with the handling of the validation results by using the “L4-RADM-01-08-Handle validation Results of Common Domain message” call activity.

It shall be clarified that in cases the received IE713 message includes ‘Delete’ operations, then central SEED will:

Validate delete operation against the applicable IE713 rules and conditions (as per the existing process for Create/Update/Invalidate operations);

Validate that the entities are deleted only by the owner MSA (as per the existing process for Create/Update/Invalidate operations);

Validate that the entities are deleted in alignment to the agreed ‘terms of collaboration’ for deletion of SEED records:

The delete operation is related to an economic operator who is not involved in any movement at all or;

The delete operation is related to an economic operator who is not involved in an open movement and;

The activation date of the ‘delete’ operation must be at least five years after the end of the calendar year of the start of any movement (i.e. date and time of validation of the e-AD/e-SAD) the economic operator is involved in.

Excise Functional Requirements BPM Report-Registration and Authorisation Data Management
PROCESS MODELS

Depending on the outcome (end event) of the “L4-RADM-01-08-Handle validation Results of Common Domain message” call activity, the following may happen:

- a. If a refusal message (IE917/IE714) is sent to the MSA Central Services (since the Operations on the register of economic operators message was found invalid), the whole process ends at this point;
- b. If the Operations on the register of economic operators message (IE713) is recorded (since it was found valid), the process continues.

Following, SEED identifies whether there are any MSAs that are registered to receive disseminations of the Operations on the Register of Economic Operators (IE713):

- In case there are no MSAs that are registered to receive disseminations of the Operations on the Register of Economic Operators (IE713), the process ends here;
- In case there are MSAs that are registered to receive disseminations of the Operations on the Register of Economic Operators (IE713), SEED proceeds with disseminating the specific IE713 messages to all MSAs that are registered to receive IE713 disseminations (by using the “L4-RADM-01-03-Dissemination of registration data” call activity) and the whole process ends.

It shall be noted that in Duty Paid B2B it is allowed to have movements among traders with temporary certified authorizations. The interconnection of the temporary certified authorizations takes place according to the following process:

- A Temporary Certified Consignee gets registered without linked trader and obtains a SEED number;
- The Temporary Certified Consignee (directly or via other stakeholders) informs the respective Temporary Certified Consignor of their SEED number;
- The Temporary Certified Consignor gets registered having as linked trader this Temporary Certified Consignee;
- The Temporary Certified Consignor (directly or via other stakeholders) informs the Temporary Certified Consignee of their SEED number;
- The Temporary Certified Consignee has their authorisation updated having as linked trader the Temporary Certified Consignor;
- The Temporary Certified Consignee (directly or via other stakeholders) informs the Temporary Certified Consignor that their authorisation is updated and completed;
- The Temporary Certified Consignor may then submit the e-SAD.

In addition, the MSAs can optionally select to implement the automation of the update of the Temporary Certified Consignee's authorisation data, upon receipt of the Temporary Certified Consignor's authorisation data by CA SEED, in which data the Temporary Certified Consignee is the linked trader to the Temporary Certified Consignor. The details of such an implementation remain a national matter.

(*) The following discrepancies are detected:

1. A discrepancy is detected between the current Common Specifications (FESS and DDNEA) and the existing system behaviour (SEED):
 - According to the current Common Specification (see Sub-section “V.I.3.1.2 Dissemination of SEED data (UC1.14)” of DDNEA and sub-Section “4.2.1 Overview” of “Dissemination of registration data (UC1.15)” of FESS Section III), after receiving a valid IE713 from a MSA, SEED builds a consolidated message (IE713) composed of all valid updates submitted by the MSAs. That is, the IE713 to be disseminated (to all MSAs that are registered to receive IE713 disseminations) contains not only the updates submitted via the specific IE713, but consolidated updates (including updates submitted previously by the MSAs); however

Excise Functional Requirements BPM Report-Registration and Authorisation Data Management
PROCESS MODELS

· According to the existing system behaviour (SEED), after receiving a valid IE713 from a MSA central services, SEED disseminates this valid IE713 to all MSAs that are registered to receive IE713 disseminations (i.e. no consolidated message is built).

Given that the existing system behaviour is considered valid, the concerned part of the flow is designed in alignment with the current system. (A relevant corrective action shall be taken in the Common Specifications as per the ITSM incident IM176181.)

2. A discrepancy is detected between FESS and DDNEA: According to DDNEA (see Sub-section “V.I.3.1.2 Dissemination of SEED data (UC1.14)” of DDNEA), after receiving a valid IE713 from a MSA, SEED disseminates this valid IE713 to all MSAs that opted for receiving IE713 disseminations. This is also in alignment with the current system behaviour. However, in FESS Section II (see EBP UC-115-110 “Disseminate changes”), it is not clarified that, in this scenario, SEED sends the IE713 only to the MSAs who are registered to receive IE713 disseminations. Given that DDNEA is considered valid in this case, the concerned part of the flow is depicted in alignment with DDNEA. (A relevant corrective action shall be taken in the FESS as per the ITSM incident IM176182.)

5.3. Process L4-RADM-01-02-Consultation of registration data by MSA central services

5.3.1. Objective of Process

The purpose of this process is to describe all possible paths in the electronic flow of the consultation of registration data by MSA central services, in accordance with the current Common Specifications (FESS and DDNEA).

The current process is triggered when SEED at Common Domain Central Services receives a Common Request message (IE701) from a MSA (MSA Central Services), indicating a request for re-synchronisation of the register of economic operators (Request Type is "5: Request for re-synchronisation of the register of economic operators").

After receiving the Common Request message, IE701 (indicating a request for re-synchronisation of the register of economic operators), SEED at Common Domain Central Services validates its data by using the "L4-RADM-01-07-Perform validation of Common Domain message" sub process. Then, SEED proceeds with the handling of the validation results by using the "L4-RADM-01-08-Handle validation Results of Common Domain message" call activity. Depending on the outcome (end event) of the "L4-RADM-01-08-Handle validation Results of Common Domain message" call activity, the following may happen:

- If a refusal message (IE917/IE702) is sent to the MSA Central Services (since the Common Request message was found invalid), the whole process ends at this point;
- If the Common Request message (IE701) is recorded (since it was found valid), the process continues.

Following, SEED builds an Operations on the Register of Economic Operators message, IE713 (containing the updates of the SEED data requested by the concerned MSA) and stores it. Then, SEED notifies the concerned MSA Central Services of the Operations on the Register of Economic Operators message (IE713) and the whole process ends.

5.4. Process L4-RADM-01-03-Dissemination of registration data

5.4.1. Objective of Process

The purpose of this process is to describe the electronic flow of the dissemination of registration data to all Member States that are registered to receive IE713 disseminations, in accordance with the current Common Specifications (FESS and DDNEA).

The process is triggered when Operations on the register of economic operators message (IE713) is recorded in SEED (SEED data is modified). After receiving a valid notification of modification from a MSA (IE713), the Common Domain sends back to all Member States, that are registered for receiving registration data disseminations, the updates of the register, as soon as they are integrated to the central SEED repository (IE713). It shall be noted that the disseminated updates of the register include only these updates submitted via the specific notification of modification, hence they do not include consolidated updates submitted previously by the MSAs.

5.4.2. Process Details

PROCESS ATTRIBUTE NAME	PROCESS ATTRIBUTE VALUE
Process ID	L4-RADM-01-03
Full Name	Dissemination of registration data
Assumptions	<p>The following notes are applicable for this process:</p> <ol style="list-style-type: none"> 1. According to FESS (Sub-section “4.2.3 General conditions” of “4.2 Dissemination of registration data (UC1.15)”), upon integration of any updates submitted by the MSAs to the central SEED repository or upon an explicit request, the MSA central services receive a signal for update of the registration data in a particular Member State or in a group of Member States; 2. According to DDNEA (see Sub-section “V.I.3.1.2 Dissemination of SEED data (UC1.14)” of DDNEA), after receiving a valid IE713 from a MSA, SEED disseminates this valid IE713 to all MSAs that opted for receiving IE713 disseminations. This is also highlighted in FESS Section II (see EBP UC-115-110 “Disseminate changes”), where it is clarified that the Common Domain central services disseminates the current update (IE713:C_QRO_DAT) to all MSAs that are registered for receiving registration data disseminations, or send a notification of available updates.

5.5. Process L4-RADM-01-05-Consultation of registration information by Economic Operators

5.5.1. Objective of Process

The purpose of this process is to describe all possible paths in the electronic flow of Consultation of registration information by Economic Operators, in accordance with the current Common Specifications (FESS) (*).

The process is triggered when the Requestor (**) decides to verify that a given Excise number is valid for the current date. For this purpose, the Requestor registers the request for verifying an Excise Number to SEED-on-Europa site. SEED-on-EUROPA site records the request for verifying an Excise Number and then proceeds with identifying whether the Excise Number contained in the request exists in the system:

- In case the Excise Number does not exist in the system, the Requestor is informed of the answer “No” and the process ends here;
- In case the Excise Number exists in the system, the process continues.

Following, SEED-on-EUROPA site identifies whether the Excise Number contained in the request is valid for the current date:

- In case the Excise Number is not valid for the current date, the Requestor is informed of the answer “No” and the process ends at this point;
- In case the Excise Number is valid for the current date, the Requestor is informed of the answer “Yes” completed by a list of the excise products, excise product descriptions and operator type (Authorized Warehouse Keeper, Registered Consignor, Registered Consignee, Tax Warehouse or Temporary Authorisation) and the whole process ends.

(*) The consultation of registration information by economic operators (via SEED-on-EUROPA) is described in FESS Section III Sub-Section “4.4 Consultation of registration information by economic operators (UC1.30)”, but currently it is not mentioned in DDNEA (A relevant corrective action shall be taken in the Common Specifications as per the ITSM incident IM176185.);

(**)Although SEED-on-EUROPA site is intended for use by economic operators, the EUROPA portal is a public site that can be accessed by any Internet users.

5.6. Process L4-RADM-01-06-SEED statistics

5.6.1. Objective of Process

The purpose of this process is to describe all possible paths in the electronic flow of the request of SEED statistics by MSA central services, in accordance with the current Common Specifications (FESS and DDNEA).

The current process is triggered when SEED at Common Domain Central Services receives a Common Request message (IE701) from a MSA (MSA Central Services), indicating a request for SEED statistics (Request Type is "7: Request for SEED statistics").

After receiving the Common Request message, IE701 (indicating a request for SEED statistics), SEED at Common Domain Central Services validates its data by using the "L4-RADM-01-07-Perform validation of Common Domain message" sub process. Then, SEED proceeds with the handling of the validation results by using the "L4-RADM-01-08-Handle validation Results of Common Domain message" call activity. Depending on the outcome (end event) of the "L4-RADM-01-08-Handle validation Results of Common Domain message" call activity, the following may happen:

- If a refusal message (IE917/IE702) is sent to the MSA Central Services (since the Common Request message was found invalid), the whole process ends at this point;
- If the Common Request message (IE701) is recorded (since it was found valid), the process continues.

Following, SEED builds a SEED statistics message, IE742 (containing the requested statistical data for the Member States, the type of statistics and the period specified in the corresponding request message IE701) and stores it. Then, SEED notifies the concerned MSA Central Services of the SEED Statistics message (IE742) and the whole process ends.

5.7. Process L4-RADM-01-08-Handle validation Results of Common Domain message

5.7.1. Objective of Process

The purpose of this process is to describe all possible paths in the electronic flow of the handling of the validation results of a message received over the Common Domain, in accordance with the current Common Specifications (FESS and DDNEA).

The process is triggered when a message received over the Common Domain is validated by SEED and the validation results are available. Depending on the validation result the following may happen:

- a. If the Common Domain message was found invalid due to Syntactic violation(s), SEED at Common Domain Central Services builds a Negative Acknowledgement of XML Receipt refusal message (IE917) and then it records it. Following, SEED at the Common Domain Central Services notifies MSA Central Services of the Negative Acknowledgement of XML Receipt refusal message (IE917) and the whole process ends at this point;
- b. If the Common Domain message was found invalid due to Coordination Protocol and/or Business Compliance violation(s), SEED at the Common Domain Central Services identifies whether the Common Domain message is an Operations on the register of economic operators (IE713) or a Common request (IE701):
 - In case the Common Domain message is an Operations on the register of economic operators (IE713), SEED builds a Refusal of Update of Economic Operators message (IE714) and then it records it. Following, SEED notifies the MSA Central Services of the Refusal of Update of Economic Operators message (IE714) and the whole process ends here;
 - In case the Common Domain message is a Common request (IE701), SEED builds a Refusal of Common Request message (IE702) and then it records it. Following, SEED notifies the MSA Central Services of the Refusal of Common Request message (IE702) and the whole process ends at this point.
- c. If the Common Domain message was found valid, SEED at the Common Domain Central Services records the valid message and the whole process ends.

5.8. Process L4-RADM-01-07-Perform validation of Common Domain message

5.8.1. Objective of Process

The purpose of this sub process is to describe all possible steps during the validation of a Common Domain message, in accordance with the current Common Specifications (DDNEA).

The current sub process is triggered when a Common Domain message is received. After the Common Domain message is received, a Syntactic validation of this message is performed:

- In case the message is found invalid due to Syntactic violation(s), the sub process ends here;
- In case the message is found valid, the sub process continues.

Following, Coordination Protocol validation of the message is performed:

- In case the message is found invalid due to Coordination Protocol violation(s), the sub process ends;
- In case the message is found valid, the sub process continues.

Finally, Business Compliance validation of the message is performed:

- In case the message is found invalid due to Business Compliance violation(s), the sub process ends;
- In case the message is found valid, the sub process also ends.
